

Day 8 - 09 June 2024

• SQL Fundamentals (Filtering statements)

SELECT *

↳ FROM table → is a way of selecting all columns from our table

SELECT DISTINCT column

↳ FROM table; → no duplicates; different values from a column

SELECT column 1

column 2

column 3

↳ FROM table_name; → We want to select specific columns from our table. We specify the column we want.

• Data Filtering

↳ We filter data if we want to get specific information from our data

↳ is a way to exclude rows of data that do not meet a specific criteria

↳ We filter based on conditions

• WHERE statement

SELECT column 1

column 2

column 3

Syntax:

FROM

WHERE

table_name

column

Students_results

Student id	name	marks
101	Ruthi	45
102	Mwali	25
103	Mube	50
104	Lethabo	60

Write an SQL query to only provide the names of students that obtained more than 60% in their exam

SELECT *
FROM students_results
WHERE marks > 60;

Answer highlighted in pink
