

Orientation Day 3 - 03 June 2026

data is everywhere

Data - a collection of facts;

- information that is connected and organised to answer business questions

- it can come in different forms, e.g. different types of media

↳ Unstructured data - has no specific formats

- inconsistent format

- e.g., podcast, music, video, picture, social media post, pdf document, a preacher, website, youtube

↳ Structured data - refers to data stored in a table with rows and columns

- consistent format

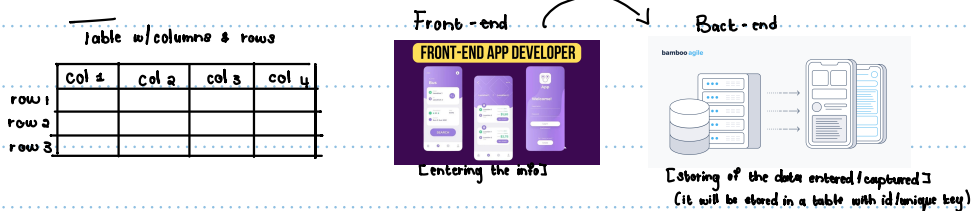

- e.g., spreadsheet (excel file), membership form

↳ You're given unique ID numbers whenever you sign up on apps or when you purchase/transactions, e.g. KFC gives you an order number. This is to keep track of data.

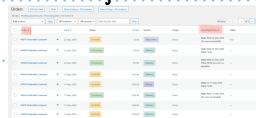

↳ POS systems for each transaction is stored on a database. ^{point of sale} they store the information as you make the transaction. ^{in the server in the store}

* Data collection - store information to make data based business decisions

* When you place an order at restaurants they give you order numbers to associate with every transaction with data. ^{Unique keys}

e.g. KFC

- NB! Data has a date & time component & it is distinguished when id number

Point of sale

- POS system -> Database

transacting

server room

store the data as transaction is being made

* Data collection - we use this data collected to recognise patterns & therefore to make business decisions [data-driven decisions]
