Assume you have a table called `employees` with the following structure:

| id | first_name | last_name | department | salary | hire_date  | city          |
|----|------------|-----------|------------|--------|------------|---------------|
| 1  | John       | Doe       | IT         | 55000  | 2018-06-15 | New York      |
| 2  | Jane       | Smith     | HR         | 48000  | 2019-07-20 | Chicago       |
| 3  | Mike       | Johnson   | Finance    | 60000  | 2017-09-30 | Los Angeles   |
| 4  | Sarah      | Brown     | IT         | 53000  | 2021-03-25 | New York      |
| 5  | David      | White     | Marketing  | 52000  | 2016-04-10 | San Francisco |
| 6  | Emily      | Davis     | IT         | 62000  | 2015-02-14 | Chicago       |
| 7  | Robert     | Wilson    | Finance    | 59000  | 2019-10-01 | Houston       |
| 8  | Jessica    | Moore     | HR         | 51000  | 2018-05-22 | Los Angeles   |
| 9  | Daniel     | Clark     | Marketing  | 53000  | 2022-06-01 | Chicago       |
| 10 | Laura      | Hall      | IT         | 50000  | 2020-08-10 | San Francisco |

Questions

1. COUNT() Function

Write a SQL query to find the total number of employees in the company.

SELECT COUNT(\*) AS total\_employees  
FROM employees;

| total_employees |
|-----------------|
| 10              |

SELECT SUM(salary) AS total\_IT\_salary  
FROM employees  
WHERE department = 'IT'

| total_IT_salary |
|-----------------|
| 220 000         |

SELECT MAX(salary) AS highest\_salary  
MIN(salary) AS lowest\_salary  
FROM employees

| highest_salary | lowest_salary |
|----------------|---------------|
| 62 000         | 48 000        |

SELECT categorical column,  
aggregate (column) AS descriptive  
FROM table\_name  
GROUP BY categorical column

\* NB remember

You only group by when there is an aggregated column.

SELECT department  
SUM(salary) AS total\_salary  
FROM employees  
GROUP BY department;

| department | total_salary |
|------------|--------------|
| IT         |              |
| Finance    |              |
| Marketing  |              |
| HR         |              |

SELECT city  
COUNT(DISTINCT) AS employee\_count  
FROM employees  
GROUP BY city

COUNT(\*) - counting all the rows in your table

↓

| city     | employee_count |
|----------|----------------|
| NY       | 1              |
| CH       | 3              |
| SANFRANS | 2              |
| HOUS     | 1              |
| LA       | 2              |
